Synergy Hub – Gap Analysis Report

Campus Hub – Group Project

Prepared by: Manthusi Karunasinghe
Role: Business Analyst
Module: Colleberative Development
Date:10.03.2026

1. Introduction

This gap analysis evaluates the differences between the defined system requirements (user stories) and the current web-based implementation of the Synergy Hub system.

The purpose is to identify missing, incomplete, or partially implemented functionalities and provide recommendations for improvement.

2. Gap Analysis Table

Requirement (User Story)	Expected Functionality	Current Implementation	Gap Identified	Recommendation
US-01 – User Registration	Users can register with valid details	Fully implemented	No gap	No action required
US-02 – Secure Login	Users can log in securely	Fully implemented	No gap	No action required
US-05 – Password Recovery	Users can reset password	Implemented	Minor gap	Improve security validation if needed
US-06 – Dashboard	Central access to all modules	Implemented	No gap	Enhance UI in future
US-13 – Facility Status	Real-time facility availability	Partially implemented	No real-time data	Integrate live data updates
US-14 – Facility Booking	Users can reserve slots	Implemented	Minor gap	Add booking conflict validation
US-19 – Clubs & Events	View of available clubs/events	Implemented	No gap	Add interaction features later
US-07 – QR Check-In	Scan QR to earn points	Partially implemented	No validation control	Add duplicate scan prevention

US-09 – Reward Tier System	Points & tier progression	Partially implemented	No full logic or limits	Implement tier rules and monthly limits
US-17 – Bus Tracking	Real-time bus tracking	Partially implemented	No GPS integration	Integrate real-time tracking
US-11 – Accessibility Routing	Accessible navigation	Not implemented	Feature missing	Plan for future sprint
US-12 – AR Navigation	AR-based navigation	Not implemented	Feature missing	Keep as extended scope
US-16 – Predictive Analytics	Show busy hours	Not implemented	Feature missing	Implement using data analysis
US-18 – Notifications	Alerts for transport updates	Not implemented	Feature missing	Add notification system
US-20 – Event RSVP	Register for events	Not implemented	Feature missing	Develop interaction module

3. Summary of Gaps

The analysis shows that core system functionalities required for the MVP are successfully implemented. However, several gaps exist in terms of real-time data integration, validation mechanisms, and advanced features.

Most identified gaps are related to partially implemented or extended functionalities rather than critical system failures.

4. Conclusion

The current system is aligned with the fundamental requirements of an academic web-based MVP. The identified gaps do not affect the core functionality but highlight areas for enhancement in future development phases.

Addressing these gaps will improve system usability, accuracy, and overall user experience.
